

OUR CAPABILITIES

FLEXOGRAPHIC PRINTING

Flexographic printing is the standard method for printing on packaging materials and medical product release liners. Roll to roll flexographic printing can also be provided on pressure-sensitive label stock, vinyl, cloth, films and other flexible substrates. These can then be over-laminated to protect the print from the elements or from coming in contact with various solvents which could destroy the ink

- PRINTING WIDTH UP TO: 350mm

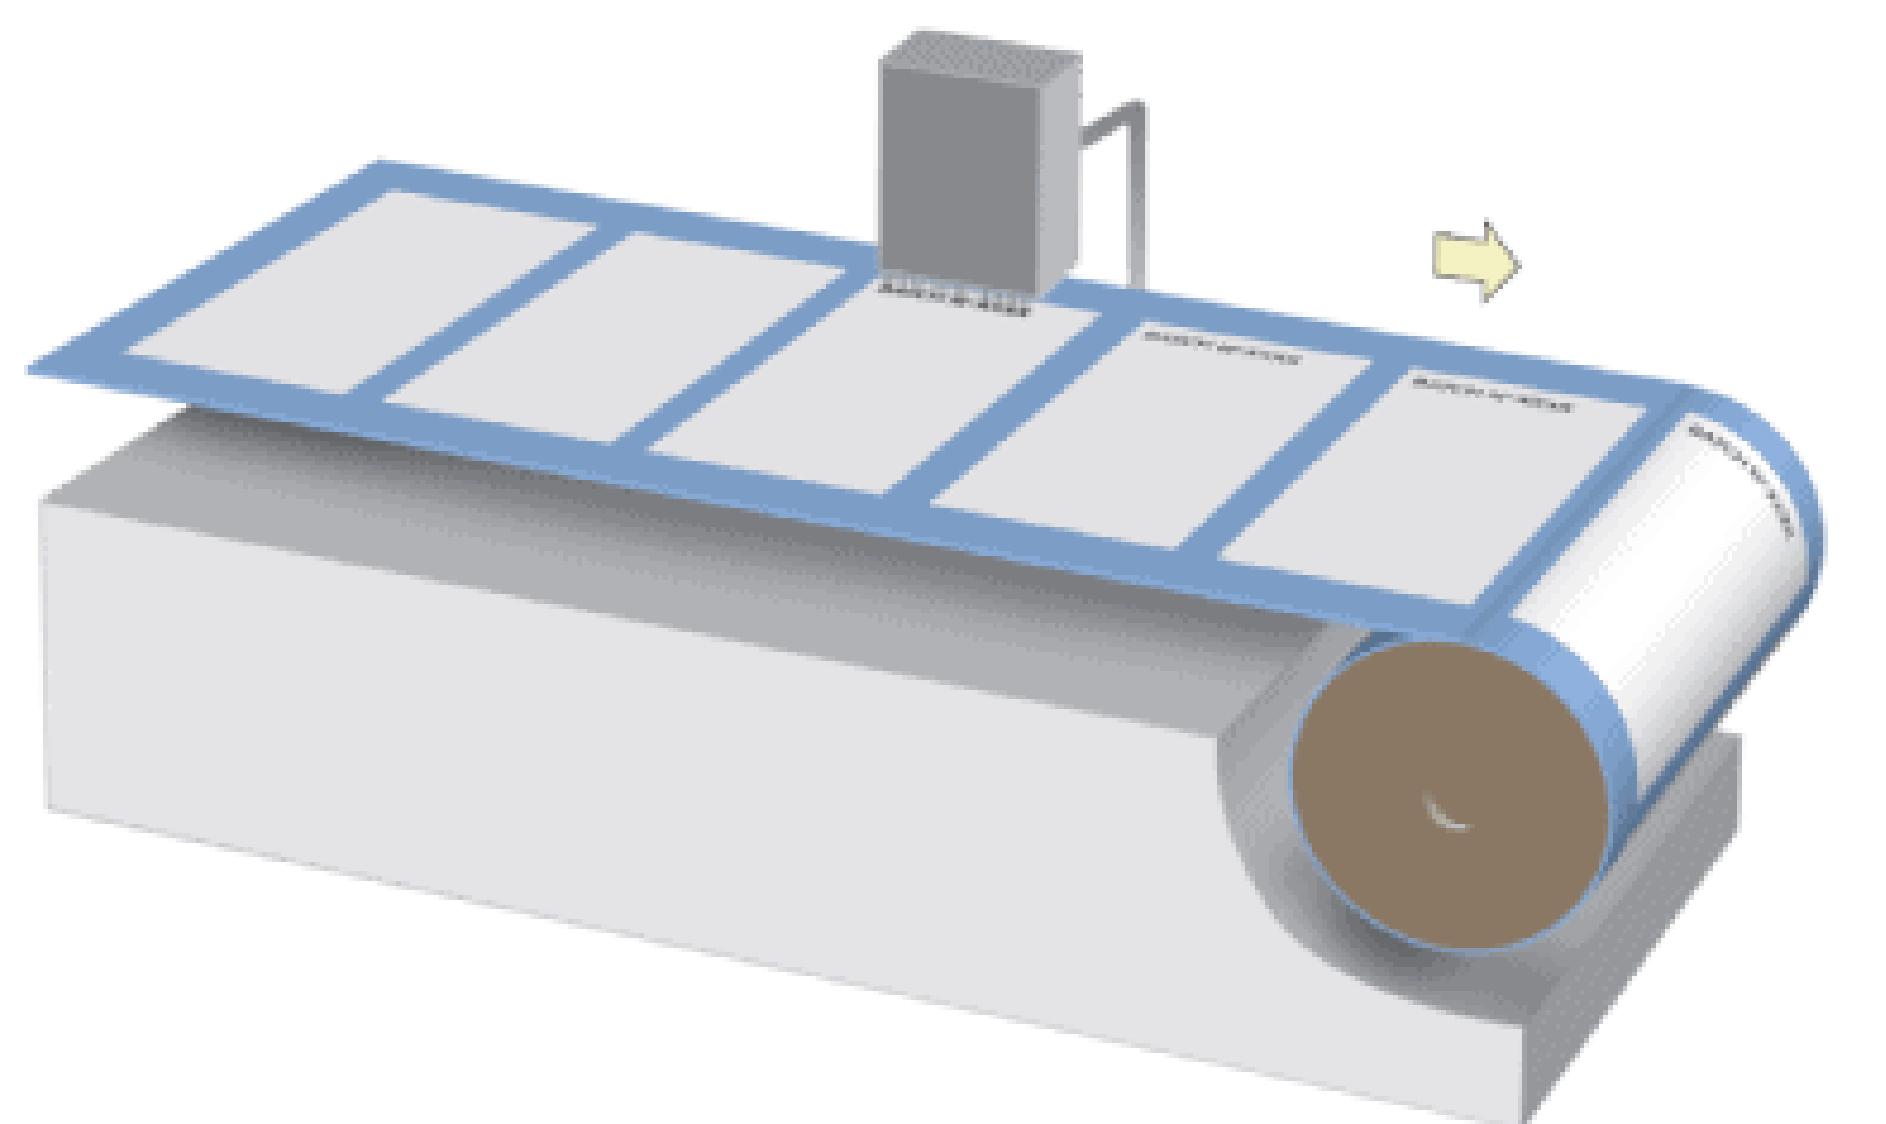

INKJET PRODUCT MARKING IN-LINE

As an aid to product identification, batch traceability, and other specialist applications, in-line inkjet printing provides total control and flexibility. A considerable range of print size options and font styles enable specific requirements to be met with minimal set-up costs. Other applications include instructions for use such as 'peel here' or 'apply this way up', or warnings such as 'Do not remove'

- HIGH RESOLUTION PRINT FOR BATCH IDENTIFICATION

High-resolution printing will allow your parts, products, and packaging imprints to have a superior appearance and legibility

PRINTING
